MEANINGFUL USE MEASURE FAQS

Sending ePrescriptions

Q: As an EP, how do I ensure that I am e-prescribing all medications possible to exceed the threshold?

MAQ Dashboard calculation only counts permissible e-prescriptions in the numerator, excluding controlled medications, over the counter medications and DMEs. However, many providers have created custom medication dosages in their MultumRx® and Medi-Span® databases. Please make sure that the custom dosages created for permissible medications are done properly so that you can e-prescribe them. For more information, refer to the document titled *Sending Electronic Prescriptions FAQ*.

Q: Does both printing and e-prescribing prescriptions count the same prescription in the denominator twice?

Yes, and so it is extremely important that as an EP you only e-prescribe and do not print the medications. If a patient insists on a paper copy, please utilize the Visit Summary or Print Medication Orders options from the Print button on the Progress Note:
